

How to Order a WIMBA Device?

Give Your Pet the Support They Deserve with WIMBA

Give Your Pet the Support They Deserve

Step 1

Veterinary Visit – Measurement Acquisition

First it is important to have a full examination by a licensed veterinary professional for diagnosis and functional assessment of your companion's condition.

For mild cases: WIMBA Go devices require just two clear photos and a few simple measurements taken by your vet.

For moderate to severe cases: WIMBA Pro devices offer a fully customized solution. Your vet will capture a precise 3D scan of your pet's affected limb using a smartphone, a calibration mat, and the WIMBA Autodolly.

Step 2

Custom Design Process

Using the submitted images or 3D scan, our experts create a custom-fit orthosis tailored to your pet's unique anatomy, ensuring maximum comfort and functionality.

Did you know? All WIMBA devices are 3D-printed, ensuring they are ultra-light, custom-fit, and waterproof!

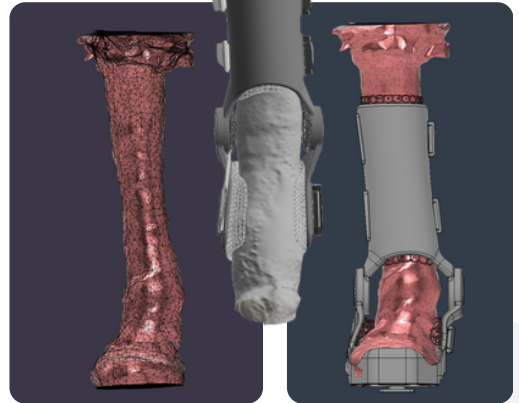

Step 3

Fabrication & Delivery

Our advanced 3D printing facility crafts each device with precision and high-quality materials.

WIMBA Go: Production takes 10 business days (Shipping: EU 1-3 days, UK & USA 3-10 days).

WIMBA Pro: The production time is longer for Pro devices; we'll provide details during the process.

Step 4

Professional Donning

Once your orthotic is ready, your WIMBA Provider will ensure a proper fit for maximum support and comfort.

Step 5 Pet Parent Guide

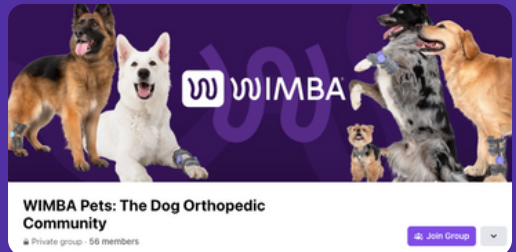

To ensure the best experience, read our Pet Parent Guide to learn how to properly use and maintain your pet's device.
