Your WIMBA devices just got a makeover! Join us as we explore the new features and benefits.

OCTOBER 2024

As a valued WIMBA Provider, we want to inform you of several device enhancements that you will begin to see in the coming weeks and months.

These updates are a direct result of our commitment to listening to our customers and continually improving our designs. The outcome is a WIMBA orthotic that is more durable and user-friendly.

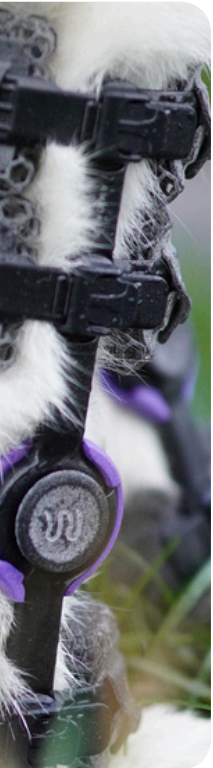

Midnight Finish

The most noticeable change is that your device now features a midnight finish, replacing the previous gray.

This new process enhances the user experience by significantly improving the "elongation at break"—essentially a technical way of saying it reduces material brittleness.

Additionally, this finish boosts the device's antimicrobial and waterproof properties. Please see the testing snapshots below for more details.

*We have already begun prioritizing high risk cases with larger animals or severe pathologies, with the intent of all devices receiving this finish by the end of 2024.

Straps, Clips, and No More Pins!

In addition, there are several smaller, less noticeable upgrades that make a significant impact on the fit and function of your device. The end result is a device that can keep up with pet's of varying lifestyles resulting in 150% increase in durability.

✓ MODULAR FASTENER CLIPS:

We understand that things happen, and there are times when an animal can't go without their device. Instead of waiting for a full reprint, the fastener clips can be easily replaced, reducing stress for the animal, provider, and pet parent.

✓ RIBBED STRAPS:

Designed for enhanced mechanical properties and a more secure fit, built to withstand the rough and tumble nature of our furry friends.

✓ NO MORE PINS:

No more checking for missing pins after walks or worrying about shifting cushions. The new design adds stability with less hassle.

WIMBA in Action

Watch our videos to see WIMBA orthotics' durability in action—they won't break, even if you step on them. Please note: don't try this at home or your practice! This was purely for crash test purposes to show the strength of WIMBA orthotics.

Summary

These enhancements are designed to make WIMBA orthotics even more durable and reliable.

MAIN BENEFITS:

MIDNIGHT FINISH

Increased strength and overall durability of device. Especially important for active dogs or with increased body weight.

RIBBED STRAPS

Better fit and function, straps contour to the shape of the limb and move with the pet in gait.

MODULAR FASTENER CLIPS

Full reprints of devices are mitigated, making sure the pet has the support it needs.

NEW INSERTS MOUNTING METHOD

Say goodbye to missing pins and shifting cushions—our new inserts mounting method provides greater stability with minimal hassle.
